

VICTOR POLOZOV

Lead Software Engineer | Automation, CI/CD, Internal Tools
victor.polozov@gmail.com | +972512435197 | linkedin.com/in/victor-polozov | Israel

EXECUTIVE SUMMARY

- Hands-on software engineering lead who builds automation, CI/CD, internal tools, and production infrastructure for complex engineering environments.
- Maintained engineering automation for 200+ projects using TeamCity, Docker, Ansible, Git, Vault, Prometheus, AWS/Azure, and Linux-based infrastructure.
- Brings 25+ years across C/C++, C#/.NET, Python, Java, legacy systems, and production support, with a track record of turning manual workflows into reliable tools and pipelines.

CORE COMPETENCIES

- Engineering Automation, CI/CD, Internal Tools, Release Infrastructure, DevOps & Production Support
- Software Engineering, System Architecture, C/C++ Modernization, Cross-platform Development
- **Languages:** C/C++, C#/.NET, Python, Java, Ruby, JavaScript/TypeScript, SQL/PLSQL, Bash, F#, VBA/VB6
- **CI/CD & Automation:** TeamCity, GitHub Actions, Jenkins, Docker, Ansible, Git, release automation, build/test pipelines
- **Platforms/Frameworks:** .NET, Ruby on Rails, Node.js, React, PostgreSQL

EXPERIENCE

- **MedM Inc** 2014 – Present
Senior Software Engineer (Technical Lead) *Remote (US-based)*
 - Designed and maintained CI/CD and engineering automation for 200+ projects, enabling repeatable builds, deployments, and release workflows across backend, mobile, cloud, and customer-specific environments.
 - Built internal tools, scripts, and operational workflows to automate builds, deployments, configuration, monitoring, and release processes, reducing repetitive manual work across cloud and on-prem environments.
 - Developed and maintained cross-platform software in C/C++, C#, Python, Ruby, Java/Kotlin, and Bash, balancing modern engineering practices with legacy system constraints.
 - Modernized C/C++ codebases and build flows, including migration to C++14/C++17, CMake adoption, and replacement of ad-hoc memory management with STL/RAII patterns.
 - Collaborated across backend, mobile, DevOps, support, and customer-facing teams to improve reliability, observability, and engineering productivity.
 - Held multiple roles including Backend Tech Lead, Mobile Lead, Architect, and Security Officer in a HIPAA/GDPR-compliant healthcare platform.
- **Lanit-Tercom** 1999 – 2014
Senior Developer & Compiler Engineer *St. Petersburg, Russia*
 - Built compilers, translators, code generators, build automation, and enterprise tools in C++, F#, Java, PL/SQL, VBA, VB6, and legacy Windows environments
 - Automated MSSQL-to-Oracle translation in F# and PL/SQL, achieving 10x cost savings compared to manual rewriting
 - Automated UI testing for a .NET application using Jenkins and VMware-based test environments
 - Maintained and enhanced large-scale Oracle/PLSQL and VB6 enterprise systems, including analysis of legacy practices and implementation of regulatory billing changes
 - Built compiler optimizations and code generation for COBOL/Java using DFA, yacc, JCL, and C++

EDUCATION & TEACHING

- **Saint Petersburg State University** 1998 – 2003
MSc, Mathematics and Mechanics Faculty *Thesis: Semantics and AST Transformations*
- **Assistant Professor** 2006 – 2015
Saint Petersburg State University *Russia*
 - Taught Formal Languages, Programming, Functional Programming; mentored thesis projects
 - Curriculum curator; SPISOK conference co-organizer (2011–2014)

LANGUAGES

- English (Fluent), Russian (Native), Hebrew (Intermediate)
