Location: Israel, Haifa district

EXECUTIVE SUMMARY

- Software Engineering Generalist with 25+ years of experience ranging from systems programming, mobile and full-stack development to automation, DevOps and SRE. Experienced in solving complex algorithmic and architectural challenges, drive system design, and deliver production-grade solutions across different domains including healthcare, compilers and education.
- Demonstrated leadership in backend engineering, mobile client platforms, and infrastructure automation. Strong academic foundation with a Master's in Mathematics, combined with a decade of teaching university-level Computer Science topics such as Functional Programming and Formal Languages. Passionate about innovation, clean design, mentoring, and contributing to projects.

CORE COMPETENCIES

- Software Engineering & System Architecture
- Development (C/C++, Ruby/Rails, etc.)
- DevOps & Infrastructure Automation
- Problem Solving & Performance Optimization
- Project & Team Leadership

CAREER SUMMARY

April 2014 – Present

Software Engineering Lead • MedM Inc • <https://www.medm.com/>

Overview: Health remote patient monitoring startup that evolved to industry-leading B2B/B2C RPM solution, including integration with a number of health Bluetooth/IoT devices. As a Software Engineering Lead I've shared several sub-roles: Mobile Client Developer, Backend Team Lead, Principal Software Engineer, Software Architect and others depending on company's priorities.

Backend Team Tech Lead:

- Organize processes and team work – 5x team growth
- Driving Software architecture and engineering best practices
- Integrations with external services: Garmin, call providers (Five9, Twilio), monetization (AppStore, Google Play, Stripe) and more
- Security improvements and audit: implemented security policies, GDPR, HIPAA, etc
- Performance monitoring and continuous improvement to support 100x scaling
- **Technologies:** Ruby-on-Rails, PostgreSQL, jQuery, Bootstrap, React, and more

Mobile Client Team Engineering Director

- Organized processes and release cycle: platform release management with flexible customization system. 500 customers with ready-to-go applications for all up-to-date mobile platforms
- Architecture improvements and new platforms support

- Offline mode support: synchronization API design, refactored architecture to MVP over SQLite database
- B2B customizations: CI/CD of customized applications with specific requirements. About 100 non-trivial customizations
- Introduced new products: SDK, Linux Hub, IoT hub, FHIR hub
- **Technologies:** C++, Java/Kotlin/ObjC/Swift/C, internal DSLs, SQLite

Security Officer

- Organized secrets management: moved company from blind-text passwords to role-based secrets management (based on Hashicorp Vault)
- Secured access to all critical services to authorized personnel only
- Introduced regular security audits

DevOps and Automation

- CI/CD maintenance with ~200 projects, ~6k build configurations
- Cloud solutions, app distribution, deployment and monitoring
- **Tools:** TeamCity, Kotlin, bash/cmd, Prometheus, NewRelic, Ansible, dockerized environments

Coaching and mentoring for junior engineers and interns.

July 1999 – March 2014

Senior Developer • Lanit-Tercom • <https://lanit-tercom.ru/en>

Multiple software engineering projects, notably:

1. Automated translation of MSSQL database code and data into Oracle for a large Russian bank.
Tasks:
 - Prepared final migration procedure of big database transfer in allowed window,
 - Introduced a regular procedure of merging generated code with manual fixes,
 - Active development of the translator.
 Programming language: F#. With PL/SQL, T-SQL as target/source languages, sh/cmd/F# for automation.
2. Support and development of the Codegen compiler for RULES language included in the AppBuilder development tool for Bluephoenix Ltd (Level 8 Technologies), Junior to Senior Developer, 2003-2009
Responsibilities:
 - Support and development of the Java code generator,
 - Development of a specification for a business-oriented Java-like OO language,
 - QA acceptance CI pipeline maintenance for code-generation compiler.
 Introduced:
 - Human-readable “pretty” COBOL code generation,
 - Minimal footprint Java code generation,
 - DFA and dead-code elimination optimizations, with MF support: C++ compilation via JCL, and optimizations.
 Core technologies: C, yacc, COBOL, Java, C++, JCL, C#.
3. Migration of Algol 68 compiler (WBC) to 32-bit x86.
4. RescueWare Workbench reengineering system by Relativity Technologies Inc., Junior/Intern Student, 1999-2002
Tasks:
 - CI/CD automation: nightly builds and tests

- Pilot support for RPG language: syntax parser and business rules extractor
 - Number of other pilot projects for Sales Team.
- Core technologies: C++, yacc, VisualBasic, VisualStudio.

5. E-learning systems and simulations in the fields of biology, medicine, and anatomy for Area9 and McGraw-Hill Higher Education.
Tasks: development and support of various DSLs and online text editors.
Technologies: HaXe (Flash, etc), internal DSLs, including general purpose functional-reactive language, C#/Silverlight, and more.
6. Regional utility payments management system, 3M+ subscribers, real-time payment processing, constantly changing legislative basis: performed system audit and acceptance for maintenance, implemented several laws changes on calculation of utility bills.
Tools: PL/SQL, Visual Basic
7. CI/CD setup for UI testing for FOSS food testing facility
Tools: Jenkins, C#, VMWare, Selenium

Also: number of pilot projects, project evaluations, software quality audit, 2008-2014

EDUCATION

MS Saint-Petersburg State University, Mathematics and Mechanics Faculty,
1998-2003
Thesis: “Language for semantics analysis and abstract syntax trees transformations”
Advisor: Dmitry Boulytchev

TEACHING & MENTORING EXPERIENCE

University Lecturer – Saint-Petersburg State University, Russia
Sept 2006 to June 2015

- Taught core courses such as Basic Programming, Formal Languages, and Functional Programming in the CS/SE department.
- Mentored diploma and thesis projects, guiding students in research and practical applications.
- Served as a curator for the Software Engineering specialty, aligning curriculum with industry standards.

PROFESSIONAL SERVICE

Conference Co-organiser
Student’s conference SPISOK, 2011-2014

LANGUAGES

English: Upper-Intermediate
Russian: Native language
Hebrew: Intermediate (א)
French: Novice

ACTIVITIES AND INTERESTS

Sport activities: Snowboard, Slackline, Crossfit, Hiking
Other: Photography
